

Sudhanshu Tiwari

✉ stiwari0223@gmail.com  [GitHub](#)  [LinkedIn](#)

Education

Abdul Kalam Technical University

Bachelor of Technology in Computer Science Engineering (Data Science)

2024 – Present

India

Experience

Data Science Intern – Thiranex

Data Science

May 2026 – June 2026

India

- Worked on a finance-focused data science project involving historical stock market data analysis.
- Performed exploratory data analysis to identify market trends, patterns, and relationships within financial datasets.

Open Source Contributor – GirlScript Summer of Code

GSSoC

May 2026 – June 2026

Remote

- Contributed to open-source software projects through collaborative development and Git-based workflows.
- Worked with project repositories, issue tracking, pull requests, and code contributions.

Projects

PhishGuard – AI-Powered Phishing Detection

 [GitHub](#)

React, Rust, JavaScript, Python, HTML, CSS

- Built a client-side phishing detection system that analyzes URLs for suspicious characteristics before users interact with potentially malicious websites.
- Implemented detection logic based on URL length, IP-address usage, suspicious keywords, domain structure, and other phishing indicators.
- Designed the system for fast client-side analysis, providing immediate feedback without requiring a backend request.

StockPulse – Stock Market Analysis & Prediction

 [GitHub](#)

Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Jupyter

- Developed a finance analytics project for analyzing historical stock market data and identifying trends and patterns.
- Performed data cleaning, exploratory data analysis, feature analysis, and visualization on financial datasets.
- Applied machine learning techniques to experiment with stock-price prediction and trend analysis.
- Created visualizations to communicate market behavior and analytical findings effectively.

DataVoyage – Titanic Exploratory Data Analysis

 [GitHub](#)

Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook

- Performed exploratory data analysis on the Titanic dataset to identify survival patterns and relationships between passenger attributes.
- Analyzed factors including age, gender, passenger class, fare, and family relationships.
- Created visualizations to communicate important patterns and insights from the dataset.

Technical Skills

Languages	C, Python, JavaScript, Java, Rust
Web Development	HTML, CSS, React, Tailwind CSS, Vite, Node.js
Data Science	Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Jupyter Notebook
Machine Learning	Supervised Learning, Classification, Predictive Modeling, EDA, Data Visualization
Tools	Git, GitHub, GitHub Actions, VS Code, Figma
Other	REST APIs, Responsive Design, Git-based Development, Open Source

Achievements

- **CodeChef 3-Star** – Achieved a 3-star competitive programming rating.
- **100-Day CodeChef Streak** – Maintained a continuous 100-day coding streak.
- **1000+ Problems Solved** – Solved more than 1000 programming and algorithmic problems on CodeChef.
- **Open Source Contributor** – Participating in GirlScript Summer of Code and contributing to open-source projects.
